WE HELP WOMEN BUILD.

How you ask?

We are here to educate, support and empower women to confidently build, renovate and develop their own way!

WITH THE RIGHT TOOLS EVERYONE CAN BUILD!

Renovating or building your own home is one of the biggest investments you can make, and developing for profit can lead you to the lifestyle of your dreams.

BuildHer Collective are helping women make building and developing a fun, rewarding and empowering experience.

Our passion for building and developing, vast business experience and constant thirst for knowledge has translated into a desire to help other women build.

We created BuildHer Collective to empower women with the right tools to build the home of their dreams or develop for profit... and its not as hard as you think! Our online programs guide you through every step along the journey, all with the support of like-minded women.

ABOUT US...

As a registered builder and successful residential developer, my recent projects have broken sales records in Northcote and I'm absolutely thrilled to have had so many featured on the front cover of Domain Magazine.

13 INTERIOR DESIGN PRINCIPLES YOU CAN USE WHEN STYLING OR DESIGNING YOUR HOME!

BALANCE.

ANCHORING.

PATTERN.

RHYTHM.

RULE OF THIRDS.

SYMMETRY & ASYMMETRY.

HARMONY.

LINE.

MOVEMENT.

ALIGNMENT.

SIGHTLINES.

SHAPE.

SCALE.

You can use the above interior design principles and many other in your designs. When you are understanding the space you will want to firstly consider how the space will feel from the user and where their eye will be drawn. We like to think about these different principles like tools in a toolkit that you can use to enhance your spaces.

Design draws on how the many different elements of your room interact with each other. Some of it is inherent and natural instinct - but by noticing what is being used and how it is being used when you enter a space then you will be able to better implement and use the principles as tools!

BALANCE

Aesthetically pleasing arrangement of elements within a space

Visual balance is when the weight of the objects/elements is equally distributed through a space to create a feeling of equilibrium.

There are three types of balance; symmetrical balance, asymmetrical balance and radial balance.

ANCHORING

Creating a focal point

An anchoring element is and object or surface that the rest of the design hinges off. This can be a fireplace, wallpaper, piece of furniture, artwork, window or even drapes.

PATTERN

Pattern is the repetition of elements, typically arranged on a grid. The use of pattern helps to add texture whilst also giving a sense of order and rhythm.

Patterns create visual interest to a surface and can be incorporated in hard and soft furnishings.

Colour will influence the intensity of the pattern, the more contrast will be more dynamic, whilst similar tones will have a more subtle presentation.

Consider the size and space when using patterning and be mindful of the size and directionality.

RHYTHM

Repetition & Progression

Rhythm plays a big role in an interior spaces repetition of key elements, colours materials, shapes – progression or graduation from small to large create a sense of movement and you experience the space.

By repeating elements in a space designers are able to create a flow through a space.

RULE OF THIRDS

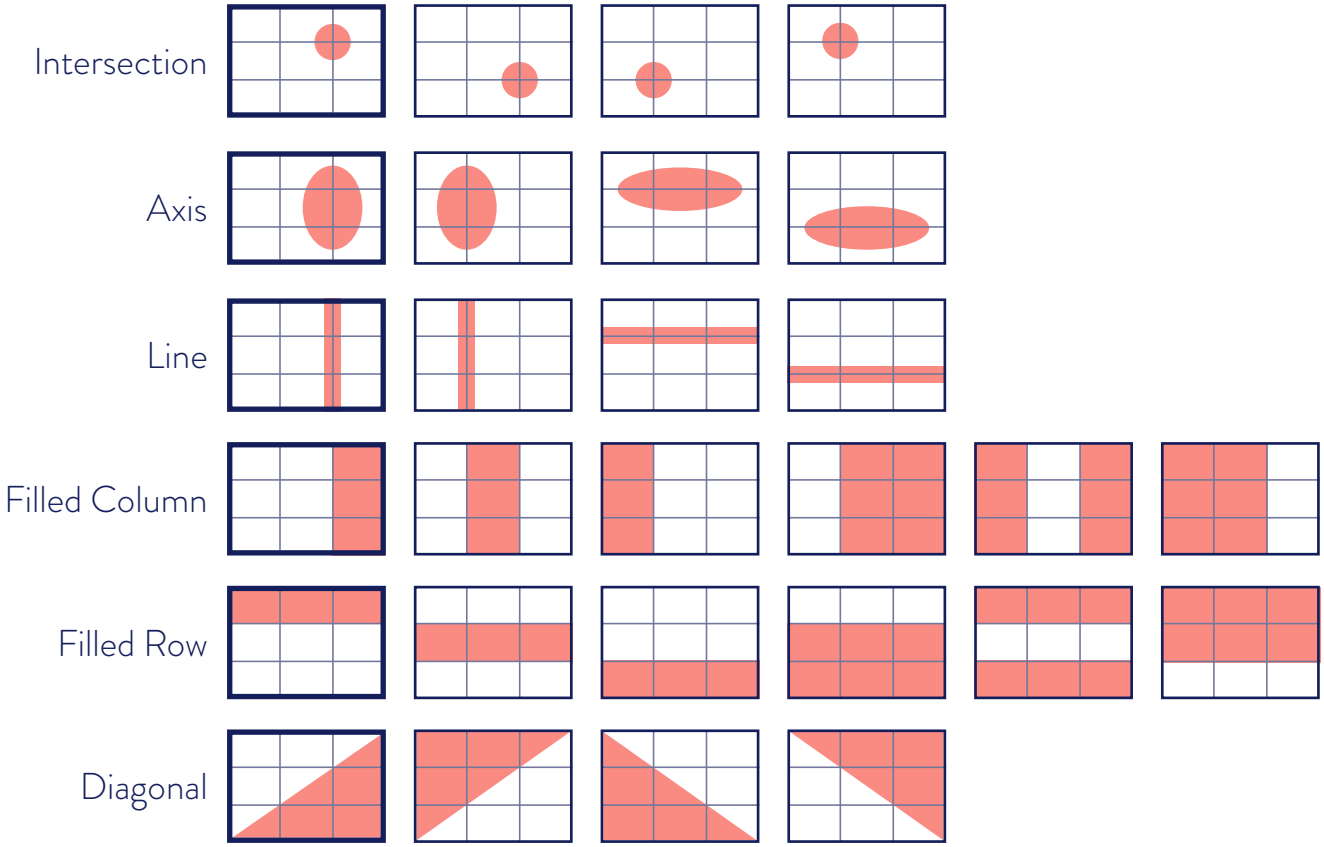
Professional photographers use the rule of thirds to compose a balanced space.

It encourages placement of the main element along the axis instead of in the center of the space.

Use this to consider wall elements such as lighting or artwork.

You might want to view the space from a camera with the grid on from the main viewpoint to check your composition.

Implementing the Rule of Thirds



Ellen Mueller

SYMMETRY

Balance along a center line

Symmetry is often used in more traditional layouts of interior spaces. You are looking for balance of elements and a mirroring of objects along a strong axis.

Symmetrical solutions are often used in dining rooms and bedrooms as a practical solution.

ASYMMETRY

The absence of symmetry.

HARMONY

Harmony is the combining of elements of a space to create a pleasing experience for the user. Harmony in a space can give a sense of a calming, relaxing interior.

LINE

Horizontal, vertical, curving and diagonal lines can be used in a room and dependent on the orientation, direction and placement they can have different impacts on how you perceive the space.

Vertical lines can have the illusion of increasing the height of a room, whilst horizontal lines can be grounding and give the perception of weight and stability. Diagonal lines often give notes of freedom and movement, directing the eye either up or down and can add volume to a space. The curved line often denote playfulness and can feel natural and organic and imply motion. Curves can be voluminous and take up much space.

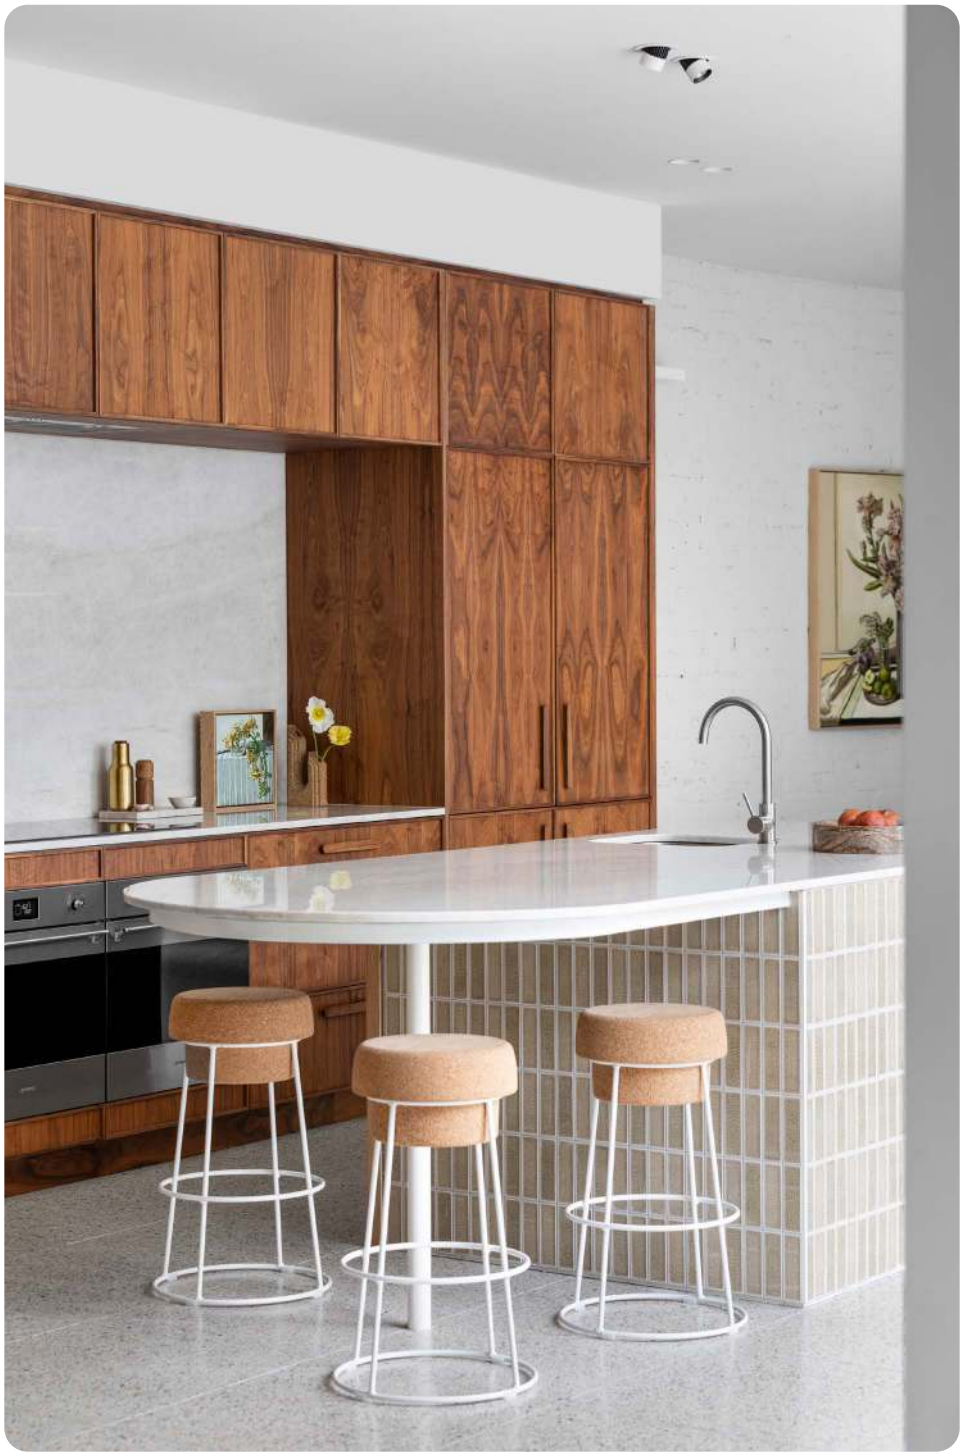
MOVEMENT

The composition elements within a space can move the viewers eye through a space. The use of lines, shapes and forms can direct the movement often to a focal point.

Movement can be closely related to rhythm and can create a more dynamic interaction with a space.

ALIGNMENT

Alignment is how you organise elements within a space, by aligning them you are grouping them spatially. Items can be in alignment vertically and horizontally – objects that are not in alignment can sometimes feel disorganized and chaotic.



SIGHTLINES

Sightlines direct the eye to the subject of interest, they can be used to draw people into a space or to move in a direction and enhance the sense of flow.

Consider your sightlines to natural elements and external spaces when you are designing interiors.

SHAPE

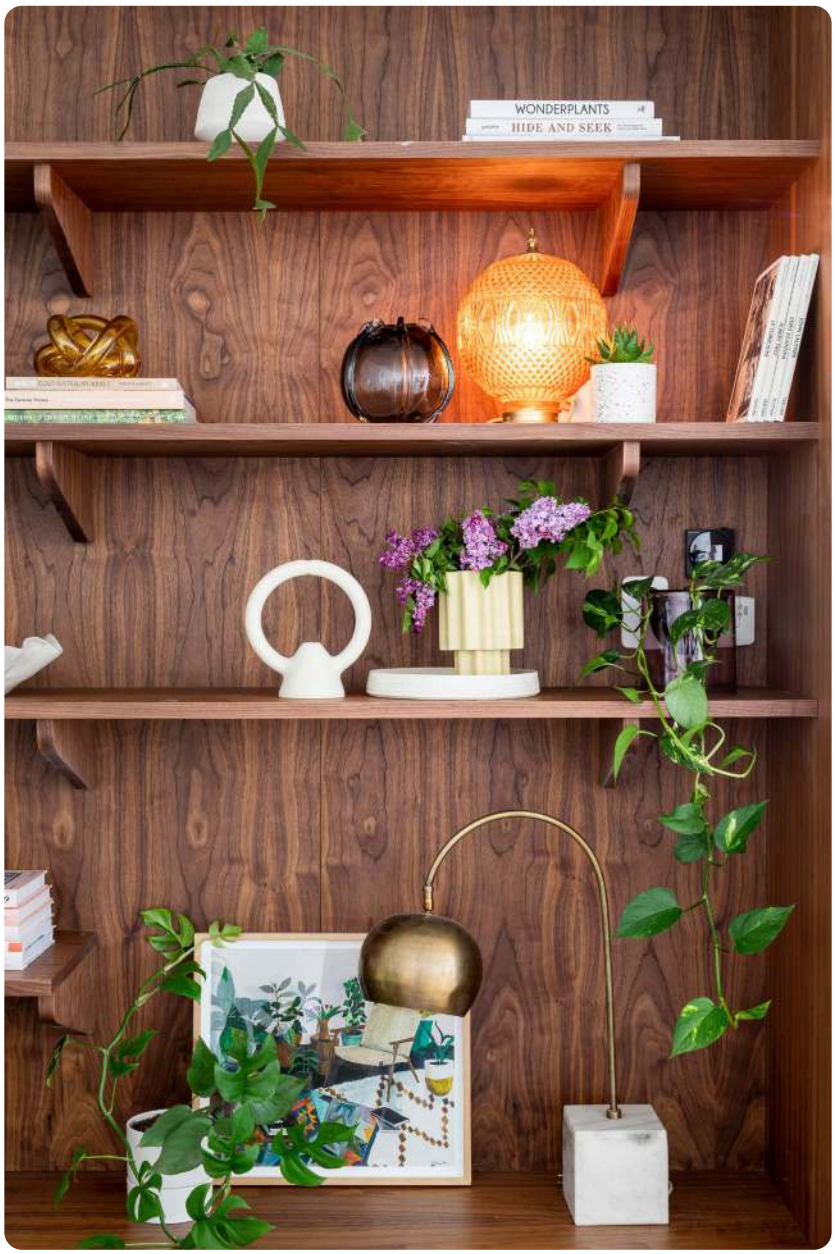
Shape can be explored in interior spaces in both 3-dimentional and 2 dimentional.

Natural shapes have a softness and calming effect on a space, where geometric shapes are harder in their form and with stronger lines they can create structure and order and appear stronger.

SCALE

The scale and proportion of objects within a space and the scale of a space will be one of the key elements you need to focus on.

Having the 'correct' sizing of pieces in relation to each other is so important. You can use scale to highlight an object or spaces in both 2D and 3D elements.



If you want to learn more about Interior Design and how you can get that DesignHer look and feel in your home then check out our ***Design-Like-A-DesignHer*** course!

Are you serious about design?

We are nuts about styling interiors. Modern and sleek, sustainable and bright, warm and cosy. You name it, we've designed it.

In fact, we are so obsessed with fine finishes and insta-worthy interiors that we got a group of industry experts together to build you something truly unique!

You see, we've not only mastered the skills to create a truly breathtaking space, but we also know the insider tips to get your dream interior styled to your vision but in line with your budget.

In this fabulous course you will get:

- 6 great modules of online content so you understand all how to design your home like an Interior Designer
- 8 industry experts and guest speakers! All experts in their fields teaching their area of Design
- LIFETIME access to this amazing self-paced program. Whenever and wherever you like – 24/7!
- Access to all of our templates, checklists and guides.
- Exclusive access to our DesignHer Only Facebook Community – your chance to connect with other DesignHers all doing the same thing as you.

PLUS BONUS Styling Mini Series with Fenton&Fenton
